TOUCHÉ CONTROLS

LATCHING, SINGLE POLE (MECHANICALLY-HELD) RELAY MODULE

RL-1P-120/277-S2

TOUCHÉ WEBSITE

INSIGHT APP

DESCRIPTION

The RL-1P is one of (4) compatible dimmer/relay modules available to use with the RD-32-S2. Utilized for switching of a single zone and interchangeable in any combination with up to 32 total modules per panel, the RL-1P is one of many options for flexible and cost-effective control of any area utilizing a panel solution.

Individual modules can be assigned to any Room Manager on the éNet network.

FEATURES

Each module is easily adjusted via the corresponding RD-32, which includes an intuitive 4.3" color touchscreen interface for:

- Local control (on/off/raise/lower) of each installed module.
- Local forced override control of each installed module.
- Channel status including channel level, channel health, source status, and module type.
- Optional password protection access to the local display functions.

The Touché RD-32 interface displays each channel and zone label in the order that it is equipped to the panel. These labels can be configured in the free Touché Insight app from any iOS or Android smartphone/tablet.
